

## EXPERIENCE

### Mechanical Design Engineer - Chassis Engineering

March 2024 — Present

Tesla

Palo Alto CA, USA

- Mechanical design engineer for suspension systems on Model Y, Model 3, and RoboTaxi programs
- Design and provide full life-cycle support for components such as wheels, wheel covers, suspension links, bushings, ball joints, knuckles, and stabars, optimizing for performance, durability, mass, and cost
- Collaborate cross functionally with other internal groups to achieve program targets - reliability engineering, testing, vehicle dynamics, vehicle modeling, tire engineering, aerodynamics, commercial, etc.
- Coordinate with suppliers on development, validation, and global industrialization of suspension components
- Built analysis tools for visualization and modeling of suspension bushing performance, including a custom state of art bushing model accounting for non-linear stiffnesses, rubber hysteresis, and high frequency dynamic behavior

### Simulation and Tire Engineer

June 2022 — Feb. 2024

Pratt Miller (Contract)

Guelph ON, Canada

- Lead developer of a vehicle data processing tool for Corvette Z06 GT3.R factory & customer teams
- Lead developer for a Dymola tire simulation library - implemented numerous tire modeling improvements
- Coordinated with Michelin, Goodyear, Pirelli on their tires used by Corvette Racing and provided tire model support
- Development of regression testing frameworks for validating Corvette Racing and IndyCar vehicle simulation libraries
- Created an advanced track temperature model capable of predicting variation in temperature across a track's surface

### Simulation and Tire Engineer

July 2019 — June 2022

Pratt Miller

Huntersville NC, USA

- GM's representative to the NASCAR Tire Testing Consortium (TTC). Responsible for supporting tire force and moment tests, coordinating with Goodyear and other OEMs on testing approach for 25+ different track tire codes.
- Generation of all base Tire Models distributed to Chevy's teams in the NASCAR Cup, Xfinity, and Truck series
- Creation of Tire Reports for NASCAR teams to inform vehicle setup decisions for each race
- Attending of track tests, processing and analysis of vehicle telemetry data
- Tuning of Tire Models during Driver-in-Loop simulation with NASCAR drivers
- Developed improved formulations of Semi-Empirical Tire Models for increased model fidelity
- Developed a comprehensive MATLAB-based tire analysis software package for Data Visualization, Data Processing, Model Optimization and Validation

## VOLUNTEER EXPERIENCE

### Member

May 2023 — March 2024

Diyode Community Workshop

Guelph ON, Canada

- Member of community workshop for metalworking, woodworking, electronics, manufacturing
- Contributed to improving the shop space and upkeep of equipment, built personal projects

### Suspension Lead, Suspension Member, Chassis Member

Sept. 2016 — May 2019

Gryphon Racing Formula SAE (Student Club)

Guelph ON, Canada

- Responsible for performing vehicle dynamics analysis to set systems-level design goals for an open wheeled race car
- Managed a team of 7 people carrying out the design and manufacturing of all suspension and steering components
- Created all-new suspension and steering setups for an updated 10" wheel package, significantly reducing center of gravity and overall mass
- Designed and manufactured numerous parts such as hubs, rockers, steering rack & column, suspension links, etc.
- Received the highest Suspension Design score at competition since team inception in 2002, and was one of the team's 4 competition drivers

## EDUCATION

### Bachelor of Engineering - University of Guelph

Sept. 2015 — April 2019

- Mechanical Engineering Specialization

## CERTIFICATIONS AND COURSES

### Foundational C# with Microsoft - freeCodeCamp

Dec. 2023

- Introduction to core concepts in C# programming through Microsoft Learn platform

<b>Design of Experiments (DoE) for Engineers - SAE International</b>	<b>Aug. 2023</b>
<ul style="list-style-type: none"> <li>Course offered by SAE covering experimental approaches for testing and characterizing physical systems</li> </ul>	
<b>HTML, CSS, and JavaScript for Web Developers - The Johns Hopkins University</b>	<b>Nov. 2022</b>
<ul style="list-style-type: none"> <li>Course on fundamentals of web design covering formatting, styling, and interactivity</li> </ul>	
<b>GD&amp;T Fundamentals Based on ASME Y14.5-2018 - SAE International</b>	<b>April 2022</b>
<ul style="list-style-type: none"> <li>Course offered by SAE covering foundational concepts required for creating and interpreting Engineering Drawings</li> </ul>	
<b>IBM Data Science Professional - IBM</b>	<b>March 2022</b>
<ul style="list-style-type: none"> <li>Comprehensive series of courses covering data science methods and best practices</li> </ul>	
<b>Fundamentals of Audio and Music Engineering - University of Rochester</b>	<b>Aug. 2021</b>
<ul style="list-style-type: none"> <li>Course on the physics of sound, and characteristics of electronics such as speakers, amplifiers, instrument circuits</li> </ul>	
<b>Neural Networks and Deep Learning - DeepLearning.AI</b>	<b>May 2020</b>
<ul style="list-style-type: none"> <li>Introductory course to the structure and applications of neural networks using Python</li> </ul>	

## SKILLS

---

<b>Skills</b>	Mechanical Design, GD&T, Structural Analysis, FEA, Manufacturing, Fabrication, Design of Experiments, Data Analysis, Optimization, Mathematical Modeling, Software Development
<b>Software</b>	Microsoft Office, SolidWorks, ANSYS, MATLAB, VS Code, Dymola, Jupyter Lab, Git, Pi Toolbox, Motec i2, Dymola, MSC Adams, MasterCam, Fusion 360
<b>Programming Languages</b>	MATLAB, Python, C++, C#, Modelica, LATEX, HTML/CSS

## PROJECTS (PERSONAL & ACADEMIC)

---

<b>Motec i2 Workspace for Driving Simulation Data</b>	<b>Aug. 2025</b>
<ul style="list-style-type: none"> <li>Created a Motec i2 Pro workspace template for analyzing vehicle telemetry data from rFactor 2</li> </ul>	
<b>Avera G-60 Electric Guitar Design</b>	<b>Oct. 2023 — Present</b>
<ul style="list-style-type: none"> <li>Created a new open-source electric guitar design</li> <li>Built project website and shared files for design and manufacturing</li> </ul>	
<b>Personal Website Design</b>	<b>Nov. — Dec. 2022</b>
<ul style="list-style-type: none"> <li>Built Jekyll-based website to share projects related to engineering and personal hobbies</li> </ul>	
<b>ChassisSim Online Race Engineering Competition</b>	<b>Oct. 2020</b>
<ul style="list-style-type: none"> <li>Competition to optimize simulated lap time and drivability of a LMP2 car, by modifying vehicle design and setup parameters</li> <li>Placed 10th out of 150+ entries</li> </ul>	
<b>Carbon Fibre Rim Design</b>	<b>Sept. 2018 — April 2019</b>
<ul style="list-style-type: none"> <li>Senior Capstone design project to design and manufacture a prototype carbon fibre racing rim</li> <li>Performed structural analysis (FEA) and designed geometry for the carbon fibre wheel</li> <li>Designed and manufactured a unique modular mold design for carbon fibre layup</li> </ul>	
<b>Shock Dynamometer Development</b>	<b>Sept. 2018 — April 2019</b>
<ul style="list-style-type: none"> <li>Built a shock dynamometer for testing and characterizing Formula SAE dampers</li> <li>Focused on enclosure design, component selection, stress analysis, kinematic analysis, and manufacturing</li> </ul>	
<b>Precision Irrigation Machine</b>	<b>Sept. — Dec. 2017</b>
<ul style="list-style-type: none"> <li>Led a design group that built a proof of concept for a precision irrigation machine, capable of accommodating different watering needs on a plant-to-plant level</li> <li>Focused on enclosure design, component selection, stress analysis, kinematic analysis, and manufacturing</li> </ul>
